

## Simple Test Document

This is a basic PDF created for testing the RAG system.

It demonstrates text extraction from actual PDF files.

Key features being tested:

- PDF text extraction via PyPDF2
- Multi-page document handling
- Text chunking and indexing
- Deduplication logic

The MCP (Model Context Protocol) client provides  
  
a standardized interface for PDF processing operations.

This architecture enables:

- Pluggable document processors
- Fallback to local processing
- Future extensibility for other formats

End of test document.
